under the control of Simian virus 40 (SV40) expression regulatory region within an expression vector and used to transfect Chinese Hamster ovary (CHO) cells. CHO transfectants can be seen to synthesise and secrete high levels of mature TGF-5 beta. TGF-5 beta induces effects on the proliferation of vascular endothelial cells equivalent to those produced by TGF-beta 1.
                                                                                                                                                                                                                                                                                                           1196 ACGAGCCCAAGGGCTACCATGCCAACTTCTGCCTGGGGCCCTGTCCTAC 1245

NAME OF THE PROPERTY OF THE PR
                                                                                                                                                                                                                                                                                                                                                                      TGF-beta (AAR92773) was cloned into plasmid pGEW-52F(+) (Promega) and the construct used to transform E. coli Y1090. Subcloning in PpLMu yielded plasmid pPLMu.hTGF-beta 1. Non-soluble, monomeric TGF-beta 1 was recovered from E. coli LC 137/ppLMu.hTGF-beta 1 (DSM 5656) transformants. A biologically active, dimeric form of TGF-beta 1 was obtd. by refolding this monomer in detergent-free buffer conty, DMSO, and/or DMF. Dimers of TGF-beta 3 (AAR92772) and TGF-beta 2 (AAR927774), and hybrid dimers (see also AAR92775-77), were
                                                                                                                                                                                                                                                                                                                                                coding sequence (AAT17235) of human transforming growth factor
                                                                                                                                                               Prodn. of dimeric biologically active transforming growth factor by refolding denatured monomer in detergent-free folding buffer contg. specific organic solvent to improve yield

AATIS462-T15464 encode transforming growth factor (TGF) beta-1,
TGF beta-2 and TGF beta-3 which are produced using recombinant
DNA technology and used to produce TGF beta-like proteins in
C dimeric form. The TGF beta alike proteins produced are hybrids of
2 different types of TGF beta e.g. TGF beta-1-3, TGF beta-2-3, etc,
c robom encrphogenic proteins e.g. BMP-2. The TGF beta hybrids were
made using a new process of producing dimeric, biologically active
TGF beta monomers with folding buffer contg. a mild detergent (CHAPS,
CHAPSO or digitonin) and at least one of the solvents DMSO (dimethyl
S sulphoxide), DMSO2 (dimethylsulphone) and DMF (dimethyl formamide).
The detergent allows folding of the monomer such that, after
and remains in soluble form. The method allows relatively high yields
of biologically active TGF beta-like proteins in their native dimeric
form, TGF-beta like proteins are multifunctional regulators of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cellular activity and a typical use is to stimulate wound healing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Prodn. of dimeric, biologically active transforming growth f

The present sequence encodes a specifically claimed TGF active fragment, TGF-betal. Additionally, the fusion protein may comprise proteinase-sensitive linker sites and binding domain so the protein sequence may contain some or all of the following elements: purification tag:proteinase site:ECM binding site:proteinase site:TGF-beta. TGF-beta promotes wound healing, and the fusion protein can be used to reduce surgery recovery time and in the preparation of artificial skin. The inclusion

of a purification tag facilitates purification of the fusion protein. The proteinase site is included to permit cleavage and release of the purification tag after purification if desired. The extracellular matrix binding site facilitates delivery of the fusion protein to the desired site of action. Delivery of the TGF-beta to the site to be treated reduces the amount of TGF-beta required to be administered to be effective and reduces the concentration of circulating TGF-beta which may result in undesirable effects.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cDNA encoding the mature form of transforming growth factor-beta-1.

The present sequence encodes the mature form of transforming growth factor-beta-1. Dimeric, biologically active TGF-beta-like protein can be produced by subjecting the denatured monomeric form to refolding conditions. The new monomeric S-sulphonated TGF-beta-like protein is useful for the production of the dimeric, biologically active TGF-beta-like protein, which is useful for the treatment of wounds repair, as a bone marrow protective agent, a mediator of cardioprotection, for the production of an anti-inflammatory or immunosuppressive preparation. Treatment is useful for animals, especially humans, and wound treatment (e.g. ulcers, bed sores etc.) is
                                                                                                                                                                                                                                                                                              Producing biologically active dimeric Transforming Growth Factor-beta - by refolding new monomeric Transforming Growth Factor-beta, useful for treatment of wounds and cancer

The present sequence encodes a transforming growth factor beta active fragment. The protein can be used in place of a bone morphogenetic active fragment to create the fusion proteins of the invention. When a bone morphogenetic active fragment is used, the fusion proteins are designated bone morphogenetic fusion proteins. The bone morphogenetic fusion proteins. The bone morphogenetic fusion proteins are designated bone morphogenetic fusion proteins are purification tag, a proteinase site, an a bone morphogenetic protein active fragment. The bone morphogenetic fusion proteins can be used for enhancing wound

101 LeuSerAsnMetValValLysSerCysLysCysSer 112
     A new method for treating hypertension comprises administering a transforming growth factor (TGF)-beta to an individual at a dose effective for lowering blood pressure; the TGF-beta may be e.g. mature TGF-beta, TGF-beta, a mature TGF-betal/beta2 hybrid, TGF-beta1 precursor, a latent TGF-beta2 precursor, hybrid TGF-beta1 beta2 precursor, a latent TGF-beta1 complex or a latent TGF-beta1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1095 GCCTGGACACCAACTACTGCTTCAGCTCCACGGAGAACTGCTGCGT 1144

cDNA encoding human pre-transforming growth factor-beta-1 (pre-TGF-beta-
                                                                                                                          The gene product is known to stimulate cell proliferation and inhibit anchorage-dependent growth of a variety of human cancer cell lines, it is esp. useful in treatment of burns and the promotion of surface and internal wound healing. TGF-beta may be expressed from a transformed CHO cell line.
                                    from transformed hosts - useful esp. for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1825

```
It was obtained by an analysis of several overlapping cDNAs and gene fragments, leading to the detn. of a continuous sequence corresp. to the TGF-beta-1 precursor mRNA. It is useful in constructing vectors that encode biologically active transforming growth factor (TGF-beta), operably linked to DNA that encodes a secretory leader (SL). It, or a nucleic acid capable of hybridising with it, can also be labelled and used in diagnostic assays for DNA or mRNA encoding TGF-beta or related
                                                                                                                                                                                                                                                                                                                                                                     Nucleic acid encoding transforming growth factor-beta - cloned into expression vectors for expression in eukaryotic host

```

Sequence encodes the 390 amino acid (AA) precursor transforming growth factor beta 1 (pre-TGF-beta 1) polypeptide. The 5' untranslated region of the TGF-beta 1 mRNA is 841 bases long, is purine rich and has a region of potential secondary structure. The TATA-like sequence in the 3' untranslated region of the gene is presumably a polyadenylation signal. Mature TGF-beta 1 comprises the C-terminal 112 AA's of pre-TGF-beta 1 and is cleaved at the Arg-Arg dipeptide preceding its NHZ terminus. The nucleic acid encoding the second subtype of TGF-beta (TGF-beta 3) is useful as a probe or to produce TGF-beta 3 for inhibition of growth of normal and neoplastic cells. Nucleotide sequence encoding transforming growth factor beta-3 -used as a probe, or to produce TGF beta 3, for growth inhibition of certain normal and neoplastic cells, eg A549. Disclosure; Fig. 1b; 61pp; English. WPI; 1990-007474/01. P-PSDB; AAR04034.

```

```
The nucleotide sequence was obtd. by an analysis of several overlapping cDNAs and gene fragments. The DNA is useful for the recombinant production of TGF beta 1, which can be used in, e.g. wound healing. (Revised entry submitted to correct sequence analysis breakdown.)
                                                                                                                                                                                                                                                                                                  34

It is a composite of overlapping CDNA clones isolated from different cDNA libraries (placenta, A172 glioblastoma, H71080 (libroblastoma) using TGF-beta exon (see AAV52936) restriction fragments as probes.

TGF-beta exon (see AAV52936) restriction of appleation of fraget cell lines and/or growth inhibition of neophastic cell lines.

Nucleic acids encoding TGF-beta have been isolated and cloned into extrors which are replicated in bacteria and expressed in eukaryotic cells. TGF-beta recovered from transformed cells is used in known therapeutic applications. TGF-beta nucleic acids are also useful in diagnosis and identification of TGF-beta clones.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             precursor sequence -

```
A chimeric gene (AAT16516) codes for a fusion protein (AAR89470) between the helical region of human collagen I(a) and human transforming growth factor beta-1 (TGF-beta-1). The collagen moiety was cloned from human fibroblast AG02261A cells by PCR amplification. The construct was inserted into a pWal vector for expression in E. coli. The fusion protein provides sustained release and delivery of TGF-beta-1 to a target tissue. The TGF increases efficacy of the body's normal soft tissue repair response and also induces
                                                                             Chimaeric DNA encoding protein contg. extracellular matrix protein domain. - and cellular regulatory factor domain, partic. useful as osteogenic agents, also related vectors, transformed cells and chimaeric proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cDNA encoding a chimeric collagen 1 (alpha1)/TGF-betal protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              3446
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         3447 AGCCGCTGCCCATCGTGTACTACGTGGGCCGCAAGCCCAAGGTGGAGCAG 3496

The specification describes a method for producing an extracellular matrix protein or its fragment. The extracellular matrix protein is capable of self aggregating in a cell which does not ordinarily violations. The method comprises optimising a nucleic acid sequence for expression in the cell by substitution of codons preferred by the cell: or naturally occurring codons not preferred by the cell: incorporating the nucleic acid sequence into the cell; and contacting the nucleic acid sequence into the cell; and contacting the cell with a hypertonic growth medium containing at least one amino caid, selected from the group consisting of trans-4-hydroxyproline and 3-hydroxyproline to allow at least one of the amino acids to be assimilated into the cell and incorporated into the extracellular matrix conception. The method may be used to make host cells assimilate and incorporate trans-4-hydroxyproline into proteins such as collagen, cuseful in the recombinant production of proteins such as collagen, concinent of the method is also useful in studying the structure and function of proteins. The method is also useful in studying the structure and function of proteins. The method is also useful in studying the structure and function of proteins. The method is also useful in studying the structure and function of proteins. The method is also useful in studying the structure and function of proteins.
trans-4-hydroxyproline; 3-hydroxyproline; recombinant protein production; collagen; fibrinogen; fibronectin; post translational hydroxylation; ss. transforming growth factor-betal; TGF-betal; chimera; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence encodes a chimeric collagen 1 (alphal)/transforming growth factor-betal (TGF-betal) protein, which may be produced using the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Production of extracellular matrix proteins containing 4-trans-hydroxyproline results in native self aggregating proteins, useful on medical implants -

```
The TGFbetal mRNA was divided into 3 regions (i.e. 5'-UTR, CDS and 3'-UTR) for various "perturbation" experiments. The relative order of the 3 regions was altered, e.g. the 3'-UTR was positioned upstream of the CDS and the 5'-UTR was positioned downstream of the CDS. The experiments showed that interactions between coding and noncoding regions are destroyed by such perturbations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 1010 | 10

The invention covers hybrid TGF-beta molecules consisting of parts of the human isoforms TGF-betal, TGF-beta2 and TGF-beta3 (see AAQ41899, AAQ41601, respectively). The hinge points between parts derived from different parent isoforms are pref. Detween amino acids 44 and 45, 56 and 57, 79 and 80, 90 and 91, or 22 and 23. Of the 30 possible hybrids using these hinge points and one part each from two of the isoforms, 6 are preferred including the hybrid TGF-beta2(44/45)beta1. The hybrid molecules promote cell migration, inhibit the growth of A375 melanoma cells, accelerate the healing of partial-thickness burn wounds and full-thickness incisional wounds and increase formation of fibrous granular tissue.
See AAQ41602-Q41607 for the most pref. hybrids.
                                                                                                                                                                                                                                                                                                                                                                                  New hybrid transforming growth factor-beta molecules - comprise portions of mature TGF-beta isoforms; useful as wound healants, cardioprotective, antiinflammatory and immunosuppressive agents etc.
                                                                                                           a

The invention covers hybrid TGF-beta molecules consisting of parts of the human isoforms TGF-beta1, TGF-beta2 and TGF-beta3 (see AAQ11599, AAQ41600 and AAQ41601, respectively). The hinge points between parts derived from different parent isoforms are pref. between amino acids 44 and 45, 56 and 57, 79 and 80, 90 and 91, or 22 and 23. The hybrid molecules promote cell migration, inhibit the growth of A375 melanoma cells, accelerate the healing of partial-thickness burn wounds and full-thickness incisional wounds and increase formation of fibrous granular tissue. See e.g. AAQ41602-Q41607 for pref. hybrids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New hybrid transforming growth factor-beta molecules - comprise portions of mature TGF-beta isoforms; useful as wound healants, cardioprotective, antiinflammatory and immunosuppressive agents etc.
                                                                                                                                                                                                                                                                                                                                                                                               hTGF-betal; hybrid protein; wound healing; cancer treatment; bone repair; growth regulation; ss.

TGF-betal is one example of a novel TGF-beta produced as a dimeric, biologically active protein using the method of the invention.

This coding sequence was isolated from the CI-215 human glioma cell line. It was incorporated into an appropriate vector to transform Saccharomyces cerevisiae or E.coli. Monomeric TGF-betal was purified, denatured and dissolved in 140ml 150m Tris/HCl pH8. 1M NaCl, 5mM EDTA, 2mM reduced glutathione, lnM oxidised glutathione and 33mM Chaps.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          рy

```
After 72 hrs at 4 deg C, pH was adjusted to 2.5 and the mixture was conc. 10 times. The conc. soln was diluted to the original vol. with 10mM HCl and conc to a final vol of 10 ml. The supernatant from centrifugation at 5000g for 30 min contained disulphide-linked dimeric
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Transforming growth factor; TGF; TGF-beta; TGF-5 beta; simian;

The sequence given encodes the human transforming growth factor (TGF)-beta 1. This was used within the scope of the invention to compare to a similan TGF hybrid termed TGF-beta 1/Deta 2 (or TGF-5 beta) (see also AAQ29177). The chimeric DNA sequence could be placed under the control of Simian virus 40 (SV40) expression regulatory region within an expression vector and used to transfect Chimese Hamster ovary (CHO) cells. GIO transfectants can be seen to synthesise and secrete high levels of mature TGF-5 beta. TGF-5 beta induces
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         effects on the proliferation of vascular endothelial cells equivalent
                                                                                                                                                                                                                                                                                                                                                                     Compsn. comprising new chimeric TGF-B (TGF-beta 1-beta 2) -
inhibits proliferation of vascular endothelial cells, useful for
treating cancer and to promote wound healing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1106 GCCTGGACACCAACTATTGCTTCAGAAATGTGCAGGATAATTGCTGCCT 1155
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            84

                                                                                                                                                                                                                                                                                                                                                              The cDNA is prepd. from African green monkey cell line BSC-40 and is expressed in eukaryotic cells in plasmid psV3. There is 100% homology between mature simian and human TGF-beta 1. The plasmid also contains the SV40 promoter and a selection marker, esp. DHFR.

```

```
The present sequence encodes a pancreatic ductal trophic factor (PDTF) polypeptide. The polypeptide is expressed by e14.5 pancreatic mesenchyme cells (especially members of the TGF-beta (transforming growth factor-beta) super family), and is capable of stimulating growth and differentiation of pancreatic tissue. The polypeptides may be used for inducing outgrowths of pancreatic duct tissue, e.g. for treating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This synthetic gene was designed based on reported sequence data, codons inferred from known amino acid sequences and observations of partial homology with known genes of the TGF-beta family. It was assembled from chemically synthesised oligonucleotides and can be expressed in prokaryotic host cells. The truncated 6 Cys TGF-beta protein is cleaved from the Fb-Fb domain at the hinge region to give
                                                                                                                                                                                                                                                                                                                                                                                                                                         /*tag= b

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  45
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    62
This synthetic gene was designed based on reported sequence data, codons inferred from known amino acid sequences and observations of partial homology with known genes of the TGF-beta family. It was assembled from chemically synthesised oligonuclectides and can be expressed in prokaryotic host cells. The sequence is that given in the specification, however, 50 bases should be inserted between nuclectides 600 and 601 of this sequence; the two "missing" Cys codons are presumably contained in the omitted sequence. The truncated TGF-beta protein is cleaved from the Fb-Fb domain at the see also AAQ11774, AAR11942-7 and AAR11954.
                                                                                                                                                                                                                    Recombinant truncated transforming growth factor-beta analogues capable of inducing an anti-proliferative effect in mammalian epithelial cells in vitro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                617 ...ccgracarcregrereregaracecagracrecaaggreeregerer 663

                                                                                                                                                                                                             Key
                                    Nucleotide sequence encoding transforming growth factor beta-3 -used as a probe, or to produce TGF beta 3, for inhibition of growth of normal and neoplastic cells, eg A549.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence encodes an exon of transforming growth factor-beta 1 (TGF-beta 1) polypeptide corresponding to AA's 288-338 of mature TGF-beta 1. The nucleic acid sequence encoding the second subtype of TGF-beta (TGF-beta 3) is useful as a probe or to produce TGF-beta 3 for both normal and neoplastic cell growth inhibition.
                                                                                                                    growth factor beta-3 (TGF beta 3); tumour cells; growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       12 GluGluAsnCysCysValArgProLeuTyrIleAspPheArgGlnAspLe 28

NAME OF THE PROPERTY OF THE PR

```
The transforming growth factor (TGF) beta 1 exon was identified using the "long probe" strategy used previously for TGF-alpha. Long oligonucleotides (T1572-23) designed on the basis of the partial protein sequence were used as hybridisation probes for the exon in a human genomic DNA library. The TGF beta 1 exon was then used as a probe for the isolation of TGF beta 1 cDNA (see AAT15270). DNA encoding TGF beta 1 is useful for the recombinant production of the protein, which is useful in, e.g. wound healing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New recombinant human transforming growth factor-beta prods. - produced using Chinese hamster ovary cells, for use in diagnostic applications

It was isolated from a human genomic library using probes based on a partial protein sequence of TGH-beta 1. The exon encodes amino acids 288-338 (see AAW78788) of TGF-beta 1. Restriction fragments of the isolated exon were used as probes for the isolation of TGF-beta 1 cDNAs (see AAV5293). The invention relates to the recombinant production of TGF-beta Nucleic acids encoding TGF-beta have been isolated and cloned into vectors which are replicated in bacteria and expressed in eukaryotic cells. TGF-beta recovered from transformed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DNA encoding transforming growth factor-beta precursor sequence - useful for analysis to perform manipulations to increase yield of recombinant production of the protein
      Human transforming growth factor-beta.gene exon fragment.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gene therapy; growth differentiation factor-8; GDF-8; AIDS; cachexia; neurodegenerative disease; amyotrophic lateral sclerosis; obesity; muscular dystrophy; musculodegenerative disease; tissue repair; muscle wasting disease; neuromuscular disorder; spinal cord injury; traumatic injury; congestive obstructive pulmonary disease; ss.
                                                                 cDNA sequences were determined for human pre-TGF-beta-1 (AAQ56923), pig TGF-beta-3 (AAQ56925) and human TGF-beta-3 (AAQ56926), and the corresponding amino acid sequences were determined (AAR46227-29, respectively). A genomic fragment corresponding to a human TGF-beta-1 exon (AAQ56924) was also isolated and its amino acid sequence determined (AAR46230). The sequences have been used in the construction of vectors for the expression of recombinant TGF-
Nucleic acid sequences encoding transforming growth factor-beta diagnostic probes, and for use in therapeutics

The present invention relates to growth differentiation factor-8 (GDF-8) coding sequences and proteins. The present sequence is a coding sequence for GDF-8, which was isolated in the present invention. GDF-8 is useful for treating neurodegenerative diseases (e.g. amyotrophic lateral sclerosis and muscular dystrophy), musculodegenerative diseases or in proliferation of rauma, obesity and disorders related to abnormal proliferation of adipocytes. GDF-8 is also useful for treating muscle adipose tissues and in gene therapy for the treatment of cell proliferative or immunological diseases mediated by GDF-8 is also useful for adition, GDF-8 is also useful for treatment of cell proliferative or immunological diseases mediated by GDF-8 in addition, GDF-8 is also useful for treating muscle wasting disease, neuromuscular disorder, spinal cond injury, traumatic injury, congestive obstructive
                                                                                                       New substantially purified growth differentiation factor-8 polypeptide, useful for treating muscle wasting disease, obesity, muscular dystrophy, neuromuscular disorder, acquired immunodeficiency syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   87 hrIleLeuTyrTyrValGlyArgThrProLysVal...GluGlnLeuSer 102
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           811 TGCGATGAGAATTCCTCAGAGTCTCGCTGCTGCAGGTACCCTCTCACTGT 860

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     19-AUG-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      11-MAY-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  22-FEB-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAF63557;
                                          257
                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to growth differentiation factor-8 (GDF-8) coding sequences and proteins. The present sequence is a coding sequence for GDF-8, which was isolated in the present invention. GDF-8 is useful for treating neurodegenerative diseases (e.g. amyotrophic lateral sclerosis and muscular dystrophy), musculodegenerative diseases or in tissue repair due to trauma, obesity and disorders related to abnormal proliferation of adipocytes. GDF-8 is also useful for treating malignancies of the various organ systems, particularly cells in muscle or adipose tissues and in gene therapy for the treatment of cell proliferative or immunological diseases mediated by GDF-8. In addition, GDF-8 is also useful for treating muscle wasting disease, neuromuscular disorder, spinal cord injury, traumatic injury, congestive obstructive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New substantially purified growth differentiation factor-8 polypeptide, useful for treating muscle wasting disease, obesity, muscular dystrophy, neuromuscular disorder, acquired immunodeficiency syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    spinal cord injury, traumatic injury, congestive obstructive disease (COPD), AIDS or cachexia.
                                                                              Gene therapy; growth differentiation factor-8; GDF-8; AIDS; cachexis neurodegenerative disease; amyotrophic lateral sclerosis; obesity; muscular dystrophy; musculeogenerative disease; tissue repair; muscle wasting disease; neuromuscular disorder; spinal cord injury; traumatic injury; congestive obstructive pulmonary disease; ss.

```
The present invention relates to growth differentiation factor-8 (GDF-8) coding sequences and proteins. The present sequence is a coding sequence for GDF-8, which was isolated in the present invention. GDF-8 is useful for treating neurodegenerative diseases (e.g. amyotrophic lateral sclerosis and muscular dystrophy), musculodegenerative diseases or in tissue repair due to trauma, obesity and disorders related to abnormal proliferation of adipocytes. GDF-8 is also useful for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             malignancies of the various organ systems, particularly cells in muscle or adipose tissues and in gene therapy for the treatment of cell proliferative or immunological diseases mediated by GDF-8. In addition, GDF-8 is also useful for treating muscle wasting disease, neuromuscular disorder, spinal cord injury, traumatic injury, congestive obstructive pulmonary disease (COPD), AIDS or cachexia.
                                                                                                                                                                                                                                            New substantially purified growth differentiation factor-8 polypeptide, useful for treating muscle wasting disease, obesity, muscular dystrophy, neuromuscular disorder, acquired immunodeficiency syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 476 BP; 111 A; 145 C; 133 G; 87 T; 0 other;

Skeletal muscle cDNA libraries from this species were screened with the murine GDF-8 probe, in order to isolate the GDF-8. The absolute conservation of the C-terminal region between species as evolutionarily far apart as humans and chickens, baboons and turkeys, suggests that this region will be highly conserved in many other species as well.

GDF-8 has been shown to result in increased bone and muscle mass (such as ribs) when expressed in reduced amounts. GDF-8 minus transgenic animals and forms of animal feed that can inhibit/reduce production of GDF-8 are of commercial interest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  of muscle, bone or adipose tissue. A GDF-8 monocloral antibody, GDF-8 antisense molecule or dominant negative polypeptide could be used with foetal or adult muscle cells, bone cells or progenitor cells. These agents can be administered to a partient suffering from a disorder such as muscle wasting disease, neuro muscular disorder, muscle atrophy,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           degenerative diseases, obesity or other adipocyte
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New differentiation factor useful for treating neurodegenerative

c (ant)agonists, potentially useful therapeutically in human or veterinary medicine. Antibodies derived from the products of the invention are used to treat muscle tissue diseases (particularly wasting diseases, or treat muscle tissue diseases (particularly wasting diseases, neuromuscular disorders, muscular atrophy and aging, e.g. spinal cord and traumatic injury, congenital obstructive pulmonary diseases, acquired immune deficiency syndrome and cachexia). Transgenic, non-human animals immune deficiency syndrome and cachexia). Transgenic, non-human animals that express the products of the invention from a transgene present in germ and somatic cells, specifically where GDF 8 receptor is expressed, may be food animals and have decreased fat and cholesterol contents and increased muscle mass. Peptides derived from the products of the invention and GDF-receptor binding and blocking agents, are reagents and diagnostic agents for studying muscle wasting diseases and for development of therapeutic agents. This sequence encodes the baboon (Papio Sp.) GDF-8 protein which is used in the method of the invention.
                                                                                                                                                                                      growth-differentiation factor-8 (GDF-8) receptor polypeptide or GDF-11 receptor polypeptide. The GDF receptors are used to identify specific
                                                                                                                                                        novel recombinant cell lines that express
transformed cells, peptide fragments and transgenic animals, for treatment and diagnosis of muscle tissue diseases

Lansforming growth factor-beta superfamily, used to induce tissue formation and in wound healing

Claim 1; Page 51-52; 73pp; English.

The present sequence encodes the Xenopus WA545 protein. WA545 proteins have the ability to induce, enhance and/or inhibit the formation, growth, proliferation, differentiation, maintenance of mesodermal establishment, proliferation, differentiation, maintenance of mesodermal clissue, including neurons and/or related neural cells and tissues such as brain cells, Schwann cells, glial cells and astrocytes, as well as muscle, nerve, epidermis and/or other connective tissue defects, as well as periodontal disease and healing of various epidermis, nerve, including spinal cord, muscle, including cardiac, striated or smooth muscle, and other tissues and wounds, and other organs such as liver, pancreas, spleen brain, lung, cardiac and kidney tissue. They can also be used to treat or prevent such conditions as osteoarthritis, osteoprosis, and other abnormalities of bone, cartilage, muscle, nerve, epidermis or other connective tissue, organs such as liver, pancreas, spleen, lung, cardiac and kidney and other tissues. They can also be used for wound healing, reduction of fibrosis and reduction of scar tissue formation. They can also be used to induce bone and/or cartilage or other connective tissue formation, and in wound healing and tissue repair and for augmenting the activity of bone morphogenetic proteins. They can also be used for treating cell populations, such as embryonic cells and incleam and for gene therapy and long and for gene therapy applications

```
This cDNA encodes a murine liver activin beta e polypeptide. Sequences derived from a beta c cDNA clone is used for screening and cloning the activin beta e gene. Disorders of cell growth or differentiation (or susceptibility to them) are diagnosed by measuring liver activin gene activity or by detecting a mutation in the liver activin gene. Disorders of haematopolesis, erythroid differentiation, ovarian follicular maturation, hormone secretion, neuronal survival, spermatogenesis, bone formation, insulin secretion or cardiac morphogenesis are some conditions that can be diagnosed using the liver activin. Cell growth and compound or agent that upregulates the compound's expression. Antagonists can be used to treat liver diseases while agonists can be used to creat liver diseases while agonists can be used to creat liver diseases while agonists can be used to creat liver diseases while dayonists.

Increase growth and regeneration of liver tissue. The liver activin compound may also induce bone growth (e.g. for treating osteoporosis, or osteomalacia) or haematopolesis, particularly erythropolesis, e.g. for treating haemophilia, cystic fibrosis or menstrual disorders. Antibodies are useful in immunoassays, to generate anti-fidictypic antibodies (which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      bind to liver activin receptors) and to inhibit liver activin. Also, transpenie animals contrading liver activin gene can be used to produce the liver activin (in correctly processed and modified forms) proteins, or the transgenic animals, are useful for screening for liver activin
                                       for
New isolated nucleic acid encoding sub-units of liver activin - useful for regulating growth and differentiation of cells, e.g. treating liver, bone and haematopoietic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ..TyrValGlyArgThrProLysValGluGlnLeuSerAsnMetValVal 106

relates to murine beta c and beta e polypeptides and the genes encoding them. Disorders of cell growth or differentiation (or susceptibility to them) are diagnosed by measuring liver activin gene activity or by detecting a mutation in the liver activin gene. Disorders of heematopoiesis, erythroid differentiation, ovarian follicular maturation, hormone secretion, neuronal survival, spermatogenesis, bone formation, insulin secretion or cardiac morphogenesis are some conditions that can be diagnosed using the liver activin. Cell growth and differentiation can be stimulated by treatment with an liver activin compound or agent that upregulates the compound's expression. Antagonists can be used to treat liver diseases while agonists can be used to increase growth and capentation of liver tissue. The liver activin compound may also induce bone growth (e.g. for treating osteoporosis or osteomalacia) or heematopoiesis, particularly erythropoiesis, e.g. for treating cueful in immunoassas, to generate anti-idiotypic antibodies which bind to liver activin receptors) and to inhibit liver activin. Also, transgenic animals containing liver activin gene can be used to produce the liver activin (in correctly processed and modified forms) proteins, or the transgenic animals, are useful for screening for liver activin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This cDNA encodes a murine liver activin beta c polypeptide. Sequences derived from beta c cDNA clone is used for screening and cloning a liver activit beta e gene. Disorders of cell growth or differentiation (or susceptibility to them) are diagnosed by measuring liver activin gene activity to them) are diagnosed by measuring liver activin gene activity or by detecting a mutation in the liver activin gene. Disorders of haematopoiesis, erythroid differentiation, ovarian follicular confirmens escretion, neuronal survival, spermatogenesis, bone formation, insulin secretion or cardiac morphogenesis are some conditions that can be diagnosed using the liver activin. Cell growth and compound or agent that upregulates the compound's expression. Antagonists can be used to treat liver diseases while agonists can be used to compound may also induce bone growth (e.g. for treating osteoporosis or compound may also induce bone growth (e.g. for treating osteoporosis, e.g. for treating haemophilia, cystic fibrosis or menstrual disorders. Antibodies can be useful in immunoassays, to generate anti-idityppic antibodies (which that a control or activity in a control or activity or dispense anti-idityppic antibodies (which the control or contro
                                                                                                                                                                                   of mouse activin genetic loci. The invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   bind to liver activin receptors) and to inhibit liver activin. Also, transgenic animals containing liver activin gene can be used to produce the liver activin (in correctly processed and modified forms) proteins,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       the transgenic animals, are useful for screening for liver activin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 10708 BP; 2651 A; 2844 C; 2607 G; 2546 T; 60 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      78
    This cDNA clone codes for ovine growth differentiation factor-8 (GDF-8) (see AAW69892), a novel member of the transforming growth factor-beta superfamily that appears to relate to various cell.

C proliferative disorders, especially those involving muscle, nerve and adipose tissue. It was isolated from a skeletal muscle cDNA library. The invention provides novel mammalian and avian GDF-8 c proteins (see AAW6983-92). Transgenic non-human animals are claimed in which GDF-8 expression is disrupted or interfered with. Also claimed are: (1) chicken or turkey eggs or meat, beef, milk, pork and lamb from these animals; (2) a method for increasing muscle comess in animals by administering an antibody (Ab) that binds to GDF-8; (3) inhibiting the action of GDF-8 by treating foetal or adult muscle or progenitor cells with a GDF-8 inhibitor; and (4) isolated nucleic acid encoding a GDF-8 protein truncated by loss of the C-terminal active fragment. The transgenic animals have increased muscle mass and for poultry reduced cholesterol contents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Transgenic animals with gene for growth differentiation factor-8 disrupted - have increased muscle and reduced cholesterol contents, also use of GDF-8 inhibitors for treating cancer, obesity,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Growth differentiation factor-8; GDF-8; sheep; transgenic animal; transforming growth factor-beta; muscle; meat; inhibitor; obesity; neuromuscular disease; muscular dystrophy; cachexia; cancer; AIDS;

Method (3) is used to treat muscle wasting or neuromuscular diseases, muscular atrophy and aging, particularly muscular dystrophy, spinal cord or traumatic injuries, congestive or obstructive lung disease, AIDS and cachexia. Method (4) is used to treat cancer of muscle, connective tissue and bone, or obesity. Also (not claimed) GDF-8 can be used to maintain myoblasts intended for transplanting or to improve efficiency of fusion. Detection may be performed with nucleic acid probes or primers. GDF-8, or sequences encoding it, can also be used to treat cell proliferative disorders associated with underexpression of GDF-8, or expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Growth differentiation factor-8; GDF-8; rat; transgenic animal; transforming growth factor-beta; muscle; meat; inhibitor; obesity; neuromuscular disease; muscular dystrophy; cachexia; cancer; AIDS;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1070 AACAAATAATATATGGGAAGATTCCAGGCATGGTAGTAGATCGCTGTGGG 1119

This cDNA clone codes for rat growth differentiation factor-8 (GDF-8) (see AAW69889), a novel member of the transforming growth factor-beta superfamily that appears to relate to various cell proliferative disorders, especially those involving muscle, nerve and adipose tissue. It was isolated from a skeletal muscle convalutary. The invention provides novel mammalian and avian GDF-8 proteins (see AAW6988-92). Transgenic non-human animals are claimed in which GDF-8 expression is disrupted or interfered with. Also claimed are: (1) chicken or turkey eggs or meat, beef, milk, pork and lamb from these animals; (2) a method for increasing muscle mass in animals by administering an antibody (Ab) that binds to GDF-8: (3) inhibiting the action of GDF-8 by treating foetal or adult muscle or progenitor cells with a GDF-8 by treating foetal or isolated nucleic acid encoding a GDF-8 protein truncated by loss of the C-terminal active fragment. The transgenic animals have increased muscle mass and for poultry reduced cholesterol contents. Method (3) is used to treat muscle wasting or neuromuscular dystrophy, spinal cord or traumatic injuries, congestive or obstructive lung disease, AIDS and cachexia. Method (4) is used to treat muscle wasting on or obestive. An example of the farmance of muscle, connective tissue and bone, or obestive. for transplanting or to improve efficiency of fusion. Detection may be performed with nucleic acid probes or primers. GDF-8, or sequences encoding it, can also be used to treat cell proliferative disorders associated with underexpression of GDF-8, or expression of a mutant protein.
